A: I will post the answer here just in case it will help someone: I was able to install the cracked version with this little trick. I decided to go with the crack version just because of the support that is available from some of the people who have already installed the crack. I also love how you can import an older versions of the model if you want to. 1. Download this 2. Extract the downloaded file (the file that has the crack) 3. Open the file that was just extracted. 4. Go to your ArcGIS program. 5. Click on the first tab: ArcCatalog. 6. Browse and open your maps folder. 7. Open your map.mxd file. 8. Right click the map.mxd and go to properties. 9. Click on the location. 10. Go to the build tab. 11. Click on the down arrow next to build/compile. 12. Choose the option of "Export your maps and data to a compressed file (mmf)" 13. Click on the save button. 14. Now the maps that you downloaded should be displayed. 15. Click on "Exit" or "quit" and close ArcCatalog. 16. Now go to your ArcGIS installer. 17. Open the folder where you have the crack file. 18. Go to the folder named "gisdata". 19. In here, you will have maps and data you downloaded in step 16. 20. Open the mmf file. 21. Now you will see a dialog box that says : "the following file does not appear to be a mmf file" 22. Press ctrl+c or go to the menu and click on "Options" and choose "Preferences..." 23. Now click on the "File Extensions" tab. 24. Uncheck "Machine-readable text (MTF)". 25. Click OK. 26. Now click on "OK". 27. Now close ArcCatalog and now open ArcMap. 28. You should now be able to find your maps and data. 29. Install your cracked files. 30. Restart your ArcGIS. 2d92ce491b
